

---

**Algorithm 0.1:** CLUSTER OF CALLOUTS(*coList*)

---

```
procedure INIT CLUSTERS(coList)
  for  $i \leftarrow 0$  to coList.size()
    do clList.insert(coList[i])
  return (clList)

procedure NOTADDED(coList)
  count  $\leftarrow 0$ 
  for  $i \leftarrow 0$  to coList.size()
    do if clList[i].added == false
      then {count  $\leftarrow$  count + 1}
  return (count)

procedure OVERLAP(cluster1, cluster2)
  overlap  $\leftarrow$  overlaps(cluster1.callouts(), cluster2.callouts())
  comment: overlaps is measured by overlap matching
  return (overlap)

main
  clList  $\leftarrow$  initClusters(coList)
  cluster_count  $\leftarrow$  cluster_List.size()
  while (1)
    do for  $i \leftarrow 0$  to clList.size()
      do if clList[i].added == false
        then {
          for  $j \leftarrow i + 1$  to clList.size()
            do if (cluster_List[j].added == false)
              do if (overlap  $\leftarrow$  OVERLAP(clList[i], clList[j]))
                if overlap > 0
                  then {
                    clList[i].insert(clList[j])
                    clList[j].added  $\leftarrow$  true
                  }
        }
